

AMENDMENTS TO THE CLAIMS

Claims 1-11 have been canceled.

12. (New) An image processing system, comprising:

an image processing apparatus which comprises an adding unit which adds an image processing command to image data, reads image data of an original and converts thus read image data into a file format which is determined from among plural file formats; and

an image receiving apparatus which receives from said image processing apparatus the image data converted into the file format thus determined, and when the image processing command is added to the image data thus received, performs upon thus received image data an image processing which corresponds to the image processing command thus added;

wherein said image processing apparatus comprises:

a storage unit which stores a file format which permits addition of the image processing command to the read image data; and

a judging unit which judges whether the file format thus determined is stored in said storage unit, and

when said judging unit judges that the file format thus determined is stored in said storage unit, addition by said adding unit of the image processing command to the read image data is permitted.

13. (New) An image processing apparatus which comprises an adding unit which adds an image processing command to image data, reads image data of an original and converts thus read image data into a file format which is determined from among plural file formats, said image processing apparatus comprising:

a storage unit which stores a file format which permits addition of the image processing command to the read image data; and

a judging unit which judges whether the file format thus determined is stored in said storage unit,

wherein when said judging unit judges that the file format thus determined is stored in said storage unit, addition by said adding unit of the image processing command to the read image data is permitted.

14. (New) The image processing apparatus in accordance with claim 13, wherein the file format which permits addition of the image processing command to the read image data is PDF (Portable Document Format).

15. (New) The image processing apparatus in accordance with claim 13, further comprising a determining unit which determines, in accordance with a load condition, whether to add the image processing command to the read image data,

wherein when said determining unit determines to add the image processing

command, said judging unit judges whether the file format thus determined is stored in said storage unit.

16. (New) The image processing apparatus in accordance with claim 13, further comprising a sending unit which sends the image data converted into the file format thus determined.

17. (New) The image processing apparatus in accordance with claim 16, wherein the file format which permits addition of the image processing command to the read image data is a file format in which a destination of the image data can execute the image processing command.

18. (New) The image processing apparatus in accordance with claim 16, wherein the file format which permits addition of the image processing command to the read image data is PDF (Portable Document Format).

19. (New) The image processing apparatus in accordance with claim 16, further comprising a determining unit which determines, in accordance with a load condition, whether to add the image processing command to the read image data,
wherein when said determining unit determines to add the image processing

command, said judging unit judges whether the file format thus determined is stored in said storage unit.

20. (New) The image processing apparatus in accordance with claim 16, wherein said sending unit sends an electronic mail to which the image data converted into the file format thus determined is attached.

21. (New) The image processing apparatus in accordance with claim 20, wherein the file format which permits addition of the image processing command to the read image data is a file format in which a destination of the image data can execute the image processing command.

22. (New) The image processing apparatus in accordance with claim 20, wherein the file format which permits addition of the image processing command to the read image data is PDF (Portable Document Format).

23. (New) The image processing apparatus in accordance with claim 20, further comprising a determining unit which determines, in accordance with a load condition, whether to add the image processing command to the read image data,

wherein when said determining unit determines to add the image processing

command, said judging unit judges whether the file format thus determined is stored in said storage unit.

24. (New) An image processing apparatus which comprises an adding unit which adds an image processing command to image data, reads image data of an original and converts thus read image data into a file format which is determined from among plural file formats, said image processing apparatus comprising:

a storage unit which stores a file format which prohibits addition of the image processing command to the read image data; and

a judging unit which judges whether the file format thus determined is stored in said storage unit,

wherein when said judging unit judges that the file format thus determined is stored in said storage unit, addition by said adding unit of the image processing command to the read image data is prohibited.

25. (New) The image processing apparatus in accordance with claim 24, wherein the file format which prohibits addition of the image processing command to the read image data is TIFF (Tagged Image File Format).

26. (New) An image processing method according to which an image

processing apparatus, which comprises an adding unit which adds an image processing command to image data and a controller which performs image processing control including control of said adding unit, reads image data of an original and converts thus read image data into a file format which is determined from among plural file formats, said image processing method comprising steps of:

disposing to said image processing apparatus a storage unit which stores a file format which permits addition of the image processing command to the image data;

making said controller judge whether the file format thus determined is stored in said storage unit; and

making said controller permit addition by said adding unit of the image processing command to the read image data, when it is judged that the file format thus determined is stored in said storage unit.

27. (New) An image processing method according to which an image processing apparatus, which comprises an adding unit which adds an image processing command to image data and a controller which performs image processing control including control of said adding unit, reads image data of an original and converts thus read image data into a file format which is determined from among plural file formats, said image processing method comprising steps of:

disposing to said image processing apparatus a storage unit which stores a file

format which prohibits addition of the image processing command to the image data;

making said controller judge whether the file format thus determined is stored in said storage unit; and

making said controller prohibit addition by said adding unit of the image processing command to the read image data, when it is judged that the file format thus determined is stored in said storage unit.
